

This project was of course much more difficult than the previous project, however my team performed admirably. There was minor friction between team members in one of the teams, but overall they worked well together and were very prompt in starting their work as well as conscientious and hard working straight through the finish line. For the division of labor:

Teresa and Jason implemented BpTreesMap.

Sharon and Trent implemented LinHashMap.

Nick tested and offered feedback / advice on both BpTreeMap as well as LinHashMap and assisted in some of the final implementation details, integrated the maps into the Tables, and created the UML diagram and Javadoc.

Grades for programmers:

Teresa and Jason : +2 Great Programming, concise and legible code, worked very well together.

Trent : 0. Great coding. Took a little bit of time to get to work but once he did, he was fantastic.

Sharon: 0. Got to work promptly and worked hard. Code was a little hard to read and took a few tries to get it to work correctly. Good coder over all!

Thanks and enjoy!
